

1. **Does the lowest allowable weight certify weight or weight-class?**

Ans. The lowest allowable weight certifies weight-class. E.g. Johnny is assessed and his lowest allowable weight is 104. He is now certified to the 112-lb weight class. When the growth allowance is added, he is still only eligible for the 112-lb. weight class.

2. **What weigh-ins count towards monitoring the descent plan, event weigh-ins or weigh-ins at practice?**

Ans. All weigh-ins count.

3. **What types of scales are acceptable for certifying weight?**

Ans. Acceptable scales are platform balance scales, the so-called "doctor's scales" and electronic scales IF and only IF they have been certified within one year of the date of the weigh-in. Only scales bearing a current seal (i.e. within one year of the date of the weigh-in) of a properly accredited scale manufacturer or certifier.
